

External Quality Assessment Scheme

ABO and Rh grouping Round 1, 2023

Specimens

Please find enclosed 2 human whole blood samples S001 and S002, each 4 mL. The red cell concentration is 15%.

If you have ordered also scheme 4460 Antibody Screening and Compatibility testing, do not discard these samples. These samples should be used also in that scheme.

Caution

Quality control specimens derived from human blood must be handled with the same care as patient samples, i.e. as potential transmitters of serious diseases. The specimens are found to be HBsAg, HCVAb and HIVAgAb negative when tested with licensed reagents, but no known test method can offer complete assurance that the specimens will not transmit these or other infectious diseases.

Examinations

See page 2. Please report only results of the analytes that are in use in your laboratory.

Storage and use

Analyse samples on the arrival day, if possible. Otherwise store in a refrigerator (+2 ... +8 °C) until the tests can be performed. The specimens are stable for 4 weeks from the date of this letter when stored at +2 ... +8 °C.

The cells should be centrifuged to the bottom of the tube and the laboratory should prepare a suspension appropriate to the method.

ABO blood grouping will be performed using cells and serum derived from specimens. Rh determination will be performed using red cells.

Result reporting

Please enter the results and methods via LabScala (www.labscala.com). If you cannot find your reagent from the registry, please contact the EQA Coordinator. If applicable, please give also the result obtained with Rh control solution (it is often used in order to differentiate autoagglutination from real agglutination, e.g. 0.9% NaCl, control cuvette in cassette/ card). There is possibility to answer confirmation group and newborn group with own result forms. Interpret these as separate sections. All reported examinations will be scored except Rh-control.

S001

S002

2023-02-27

INSTRUCTIONS

Product no. 4420
LQ714323011-012/BE

If the kit is incomplete or contains damaged specimens, please report immediately to info@labquality.fi.

The results should be reported no later than **March 20, 2023.**

Report Info**PARTICIPANTS**

Altogether 161 laboratories from 15 countries participated in this EQA round.

REPORT INFO

The principles of the scoring will be as follows:

ABO**1. Reaction strengths**

Correct agglutination reaction and grade: 1 point/reaction, altogether 6 points /specimen
Correct reaction, but large difference in reaction grade from the expected: 0.5 points /reaction (eg. 2+ for an expected 4+)
Wrong agglutination reaction: 0 points

2. Interpretation

Correct interpretation: 6 points/specimen, maximum points / specimen = 12

Rh(D)**1. Reaction strengths**

Correct agglutination reaction and grade: 1 point/reaction, altogether 2 points /specimen
Correct reaction, but large difference in reaction grade from the expected: 0.5 points /reaction (eg. 2+ for an expected 4+)
Wrong agglutination reaction: 0 points

2. Interpretation

Correct interpretation: 2 points/specimen, maximum points / specimen = 4

Report Info**PARTICIPANTS**

Altogether 161 laboratories from 15 countries participated in this EQA round.

REPORT INFO

The principles of the scoring will be as follows:

ABO**1. Reaction strengths**

Correct agglutination reaction and grade: 1 point/reaction, altogether 6 points /specimen

Correct reaction, but large difference in reaction grade from the expected: 0.5 points /reaction (eg. 2+ for an expected 4+)

Wrong agglutination reaction: 0 points

2. Interpretation

Correct interpretation: 6 points/specimen, maximum points / specimen = 12

Rh(D)**1. Reaction strengths**

Correct agglutination reaction and grade: 1 point/reaction, altogether 2 points /specimen

Correct reaction, but large difference in reaction grade from the expected: 0.5 points /reaction (eg. 2+ for an expected 4+)

Wrong agglutination reaction: 0 points

2. Interpretation

Correct interpretation: 2 points/specimen, maximum points / specimen = 4

External Quality Assessment Scheme

ABO and Rh Grouping Round 1, 2023

Specimens

Sample S001 and sample S002 were human based whole blood samples.

Based on the previous tests and the results obtained in the round, the samples were homogeneous, stable and suitable for the external quality assessment scheme. The materials were sent without any temperature control packaging.

Sample S001 (LQ714323011): Blood from A RhD negative patient with anti-D and anti-B in plasma.

Sample S002 (LQ714323012): Blood from AB RhD positive patient with no antibodies in plasma.

Report info

Please see the description of the scoring on the last page of the laboratory-specific reports and global reports. It is important to read the Final report first, because it contains important information of the samples and results in each round.

Comments – Expert

ABO group

Sample S001: The expected result was A. There were only few errors made.

Sample S002: The expected result was AB. All participants reported the correct group.

RhD typing

Sample S001: The expected result was RhD negative. No mistakes were made.

Sample S002: The expected result was RhD positive. No mistakes were made.

The results were excellent.

Exceptions in scoring

No exceptions.

End of report

2023-04-17

FINAL REPORT

Product no. 4420
